1. This communication is in response to applicants amendment filed on April 29, 2003.

2. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on April 29, 2003 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4,6-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over French.

French discloses a wheel rotation detecting device with a rolling bearing unit; a stationary ring; a rotary ring; a plurality of rolling elements; an encoder; a plurality of sensing elements including a first sensor for temperature measuring and a second sensor for detecting vibration etc. (Note fig. 8, Col. 1, lines 52+).

French fails to show the holder made of synthetic resin. It is very well known in the magnetic field sensing art to use synthetic resin or just molded resin for supporting sensing elements (note references on PTO form 892) to make sensing elements integrated, prevent vibrations or from external environment. Consequently, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of French to support sensing elements in the synthetic resin to make the device more sturdy thus enhancing the reliability and sensitivity of the device.

4. Applicant's arguments with respect to claims 1-4,6-21 have been considered but are moot in view of the new ground(s) of rejection.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morita et al. and Sakamoto et al. are cited to show synthetic resin.
